Paul Claman MD.,
Clinical Director, IVF-ET Program,
The Ottawa Hospital
Suite 505 - 737 Parkdale Ave.,
Ottawa ON., K2A 2J2

Dear Paul,

I have read with great interest your e-mail of Sept. 7th. I am attaching a fact sheet on myself and my company and hope we can meet in the near future to discuss the scope of my potential involvement in what sounds like a very interesting project indeed.

Sincerely,

B. Friedman

Barry Friedman

Emax Computer Systems – Fact Sheet

Incorporated in 1983, Emax has provided consulting services with a full range of deliverables including:

- Systems analysis
- Custom software development and support
- Network Provisioning and support
- Staffing
- Documentation preparation and end-user training

Its principal, Barry Friedman, has been active in the field of computer consulting for over forty years. His early years were spent in commercial data processing, developing systems for a wide range of applications in many industry segments including chemical, textiles, jet engine manufacture, retail, transportation, government, etc. applying a problem solving approach to customer needs.

In recent years, his emphasis shifted to applications in technical computing in the telecommunications sector. His relationship with Nortel Networks spanned a twenty year period in which he participated in establishing their first Unix networked applications for technical support groups.

He most recently (1994-2004) was involved in a long-term contract with Nortel Networks in which he recruited and managed a

.../2

team which provided a complete turn key solution to complex information storage and search and retrieval requirements in support of Nortel’s customer support and troubleshooting groups in which Emax developed and operated a client-server application which provided access to technical documentation and problem reports and which was used by up to 2000 concurrent users in a world wide networked environment. Emax was given the mandate and responsibility to operate servers on Nortel’s corporate network and deal directly with disparate user communities including Nortel’s field support groups in the U.S., Canada, Australia, the U.K., and Nortel’s corporate customers (telephone companies) and joint venture organizations.

Mr. Friedman has also participated in Open Source program development and testing with the XEmacs editor project.

Emax currently operates an internet web server for a number of clients.
